

# Product Safety part in H&S

Constantin Popa

June 2022

# Statements

- Offshore: anything coming onboard needs to be covered by “papers”:
  - People: ID/passport, fit for work certificate, training certificates
  - Substances: Safety Data sheet
  - Equipment: Certificates (i.e. EU Declaration of Conformity and/ or other applicable certificates)
- **Health and safety** – it is about the people – “we need to instruct, organize and care for our people”. “You are your own best safety manager” “use only **certified products**”
- **Product Safety** – it is about the products – “products must be safe for the intended use”, “Suppliers must provide warnings and manuals together with the product”

# Own experiences

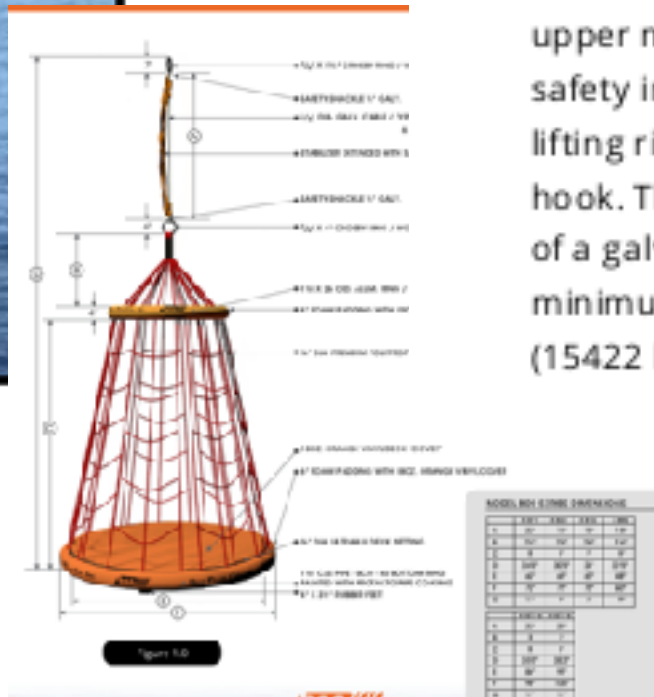

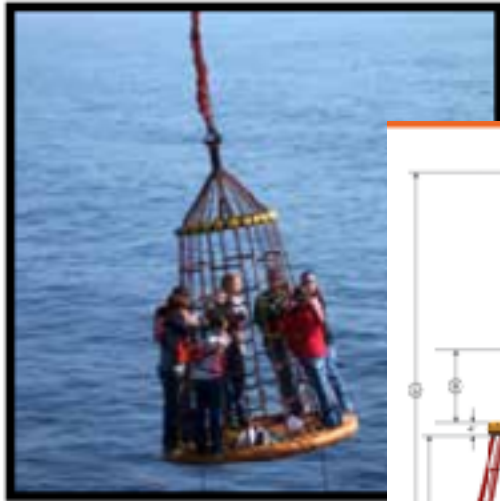

- How long can a safety helmet “last”?, are stickers allowed?

Safety ring instead of safety pin? Allowed ... or not?

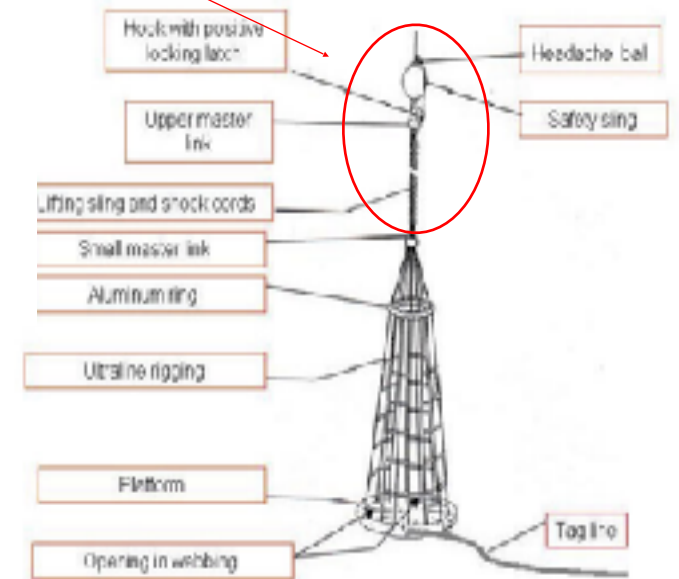

# Secondary retention sling for personnel transfer basket ...

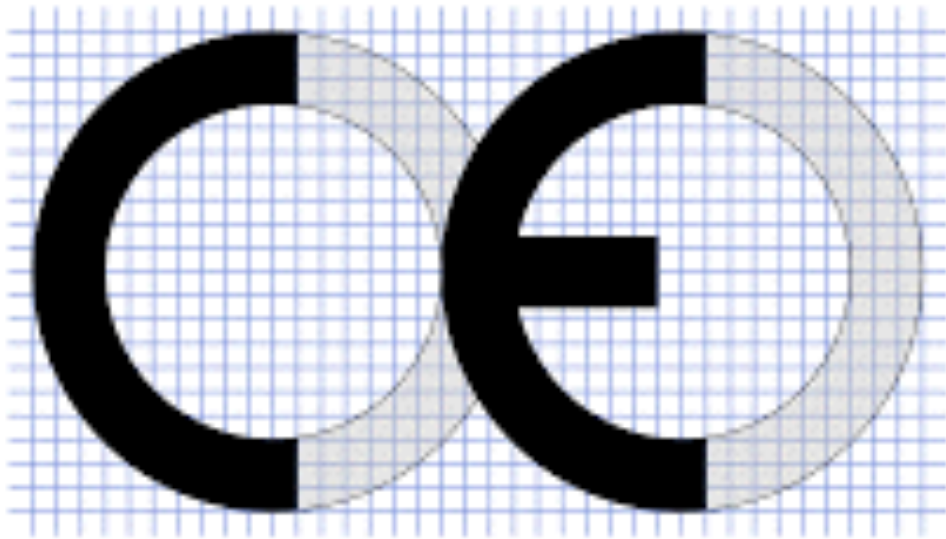

- **Safety Sling or Lanyard**

A safety sling or lanyard designed to provide emergency fall containment, should be affixed between the crane hoisting line and the carrier upper master link. This will add a measure of safety in the event the personnel net upper lifting ring becomes detached from the crane hook. The safety lanyard should be composed of a galvanized steel wire rope sling, with a minimum breaking strength of 34,000 lbs. (15422 kgs).

CE Mark does not necessary mean Conformance  
Europeene...

"Conformité Européenne"

"China Export"

# What is in the back of a genuine certificate and mark

- Tests according to a standard which is harmonized with the European Directives (electrical, mechanical/machinery, EMC, etc)
- Placing on the market = some requirements need to be respected
  - Risk management needs to be done (hazard identified – plan to mitigate - risk is mitigated)
  - Mitigation is properly done – above mentioned tests
  - Manuals are issued and given to customers
  - Warnings are issued / placed on products/ given to customers
  - Markings are issued/ placed on the products
- A certified product will be safe, according with the standards it is tested against..
- Did you know that in today's world software can harm/ kill people? (open question)

Thank you, stay safe!
